Art Unit: 1743

Upon updating the search a new reference has been found that requires a new grounds of rejections. Applicant's 10/16/03 terminal disclaimers have overcome the obviousness type double patenting rejections over USP 6,019,944 and 5,885,527. Applicant's cancellation of claims 85-91 have obviated the obviousness type double patenting rejections over USP 6,143,576 and the 35 USC 102(e) rejections over Watts et al. and Ullman et al.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 74-84 and 92-100 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Winkler et al. (USP 6,040,193).

The Office has read the earliest priority to the claimed subject matter to 08/065,528 filed 5/19/93 from which USP 5,885,527 was a divisional. USP 5,458,852, filed 5/21/92, was considered but lacks the concept of a hydrophilic capture zone having receptors immobilized thereto delineated by a hydrophobic zone.

Winkler et al. has the earliest filing date of 11/20/92 for the subject matter disclosed in the patent above. Winkler et al. teaches an array that have affinity reagents bound thereto which has been read on the claimed antibodies, antibody fragments or nucleic acids molecules. Claim 4 teaches the polymers are attached to a hydrophilic surface that is surrounded by hydrophobic material.

Response to Arguments

Art Unit: 1743

Applicant's arguments with respect to claims 74-84 and 92-100 have been considered but are moot in view of the new ground(s) of rejection.

However, if Applicant were to amend the claims to recite only the textured surface, the claims would be in condition for allowance.
